

**Question:**

- *Is there a laser pointer available in the smart classroom?*

**Answer:**

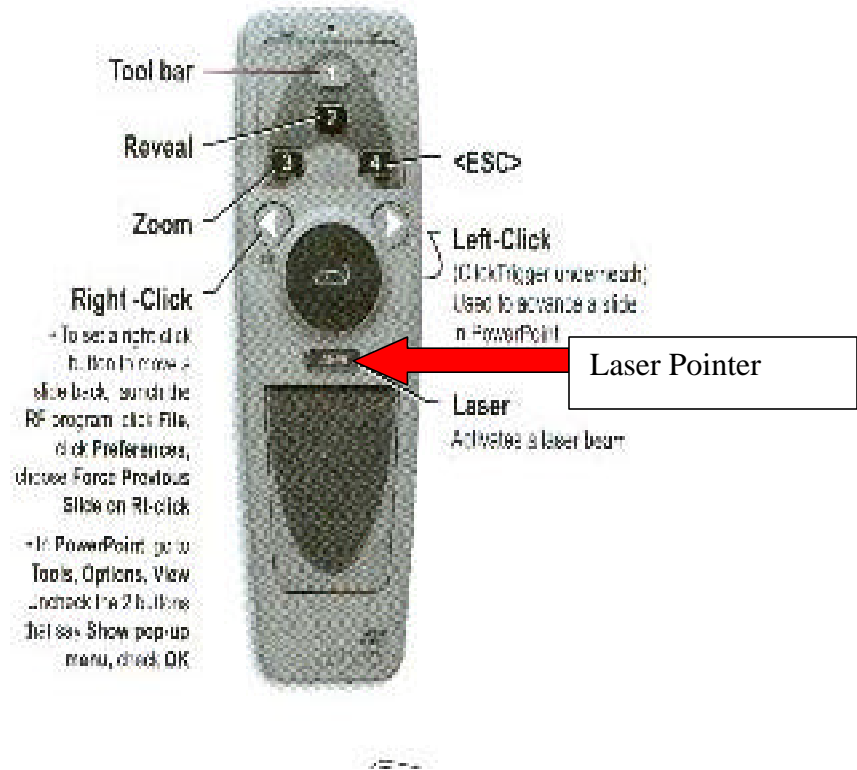

**There are many remote control units with Laser Pointer capabilities.**

The projector's remote control unit is usually equipped with a laser pointer.

The Laser beam is emitted while pressing the Laser button within 1 minute. When using the Laser Pointer for more than 1 minute, release Laser button and press it again.

**RF remote controls are *not* available in all rooms.**

If your room is equipped with an Interactive RF Remote Control for Presentations you can also use the laser pointer option on this device.

**Question:**

- Can I advance my PowerPoint slides away from the computer system?

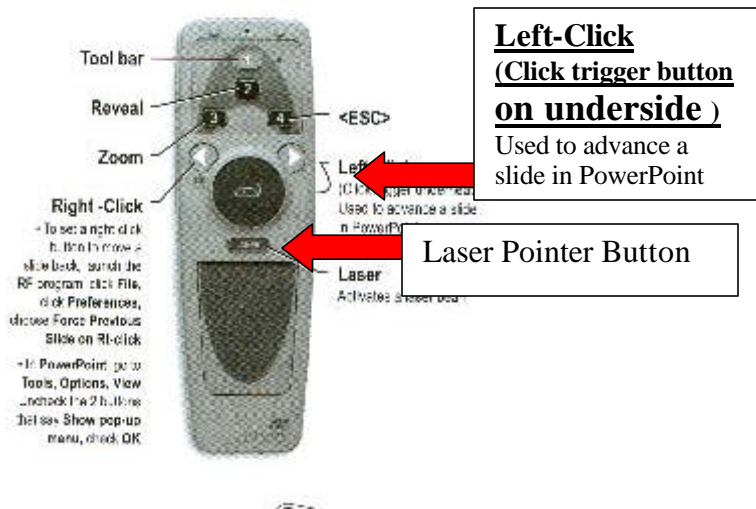

**Answer:**

If your room is equipped with a wireless remote mouse, you can advance your PowerPoint slides using this device as long as there is NO interference between you and the receiver.

If your room is equipped with an Interactive RF Remote Control for Presentations you can use this remote to advance your slides.

**Slides are advanced when you click the trigger button on the bottom of the remote.**

**Please note, if you are using a Smart Classroom with a Macintosh Station, Buttons 1, 2, 3, 4, and the right click option is NOT available for use with the Mac Platform.**
